

“Whatever you do, work at it with all your heart”

Colossians 3:23

Coding

Year 3

Summer 2

Key Knowledge

To know
that:

- The word 'repeat' can write a program in less steps.
- A program can achieve a specific goal.
- An algorithm is a set of instructions.
- A command is a single instruction in a computer program.
- An efficient program has the least amount of steps.
- A bug is a problem in a computer program.
- Fixing a problem in a program is called debugging.
- Completing a program in a shorter amount of steps limits the chances of a bug.
- Coding software such as code.org and Scratch can be used to create and design programs.
- Coding software allows you to edit and change programs.
